RESEARCH

ARCIDS Lab, Wuhan University

2026 – Present

Research Collaborator

Remote

- Research on **safety and evaluation of agentic AI systems**: multi-agent equilibrium harm, memory auditability, and stakeholder-centered transparency; three workshop papers accepted at KDD, UAI, and IJCAI-ECAI 2026 (below)
- Argued that agent safety must be evaluated at the **system level**: harms emerging from multi-agent equilibria and memory subsystems are invisible to single-agent, single-step benchmarks
- Designed the **Agent Memory Safety Audit (AMSA)** and validated it in a Qwen3-14B LangGraph stress test, showing visible-store audits passed while checkpointed state retained pre-update behavior in 17/20 deletion-correction cases

PUBLICATIONS

- Equilibrium-Level Harm in Multi-Agent AI Systems: Why Individual Evaluation Fails.** KDD 2026 Workshop on Agentic AI Evaluation and Trustworthiness, Jeju, South Korea
- Auditable Memory as a Safety Requirement for Agentic AI.** SafeAI Workshop, UAI 2026, Amsterdam
- Verification Burden as Stakeholder-Centered Transparency: Evaluating Legal AI for Access-to-Justice Users.** CLEAR Workshop, IJCAI-ECAI 2026, Bremen

ENGINEERING EXPERIENCE

Verc

Jan. 2026 – Present

Founding AI Engineer

Remote (U.S. B2B SaaS, seed-stage)

- Designed a **runtime rule-enforcement system** translating regulatory requirements into machine-checkable constraints evaluated against live agent behavior
- Built a **custom orchestration framework** managing state, concurrency, and enforcement across a distributed agent stack, replacing off-the-shelf frameworks for control and debuggability

AIT Solutions

Oct. 2024 – Jan. 2026

AI Software Developer · DevOps Engineer · Back End Developer

Bishkek, Kyrgyzstan

- Implemented backend services with **FastAPI, Redis, and Elasticsearch**: caching layer to cut database load, notification system, secure file encryption, Docker deployment
- Built **AWS infrastructure with Terraform/Terragrunt**; deployed services on ECS and Lambda, maintained Bitbucket CI/CD
- Designed autonomous end-to-end workflow systems: FastAPI backends and FastMCP servers orchestrated through LangChain/LangGraph

Freelance

May 2022 – Oct. 2024

Full Stack Engineer

Bishkek, Kyrgyzstan

- Built websites and web applications for local small businesses end to end: responsive layouts, backend integrations, deployment, direct client scoping

EDUCATION

American Institute of Technology

Sept. 2023 – May 2027 (expected)

B.S. in Computer Science · GPA 3.84 / 4.0

Bishkek, Kyrgyzstan

SKILLS

Languages : Python, TypeScript, JavaScript, SQL

Systems : FastAPI, Django, PostgreSQL, Redis, Elasticsearch, Docker, AWS (ECS, Lambda), GCP, Terraform, CI/CD

ML/Agents : LangGraph, LangChain, Amazon Bedrock, FastMCP, LLM evaluation, guardrail systems
